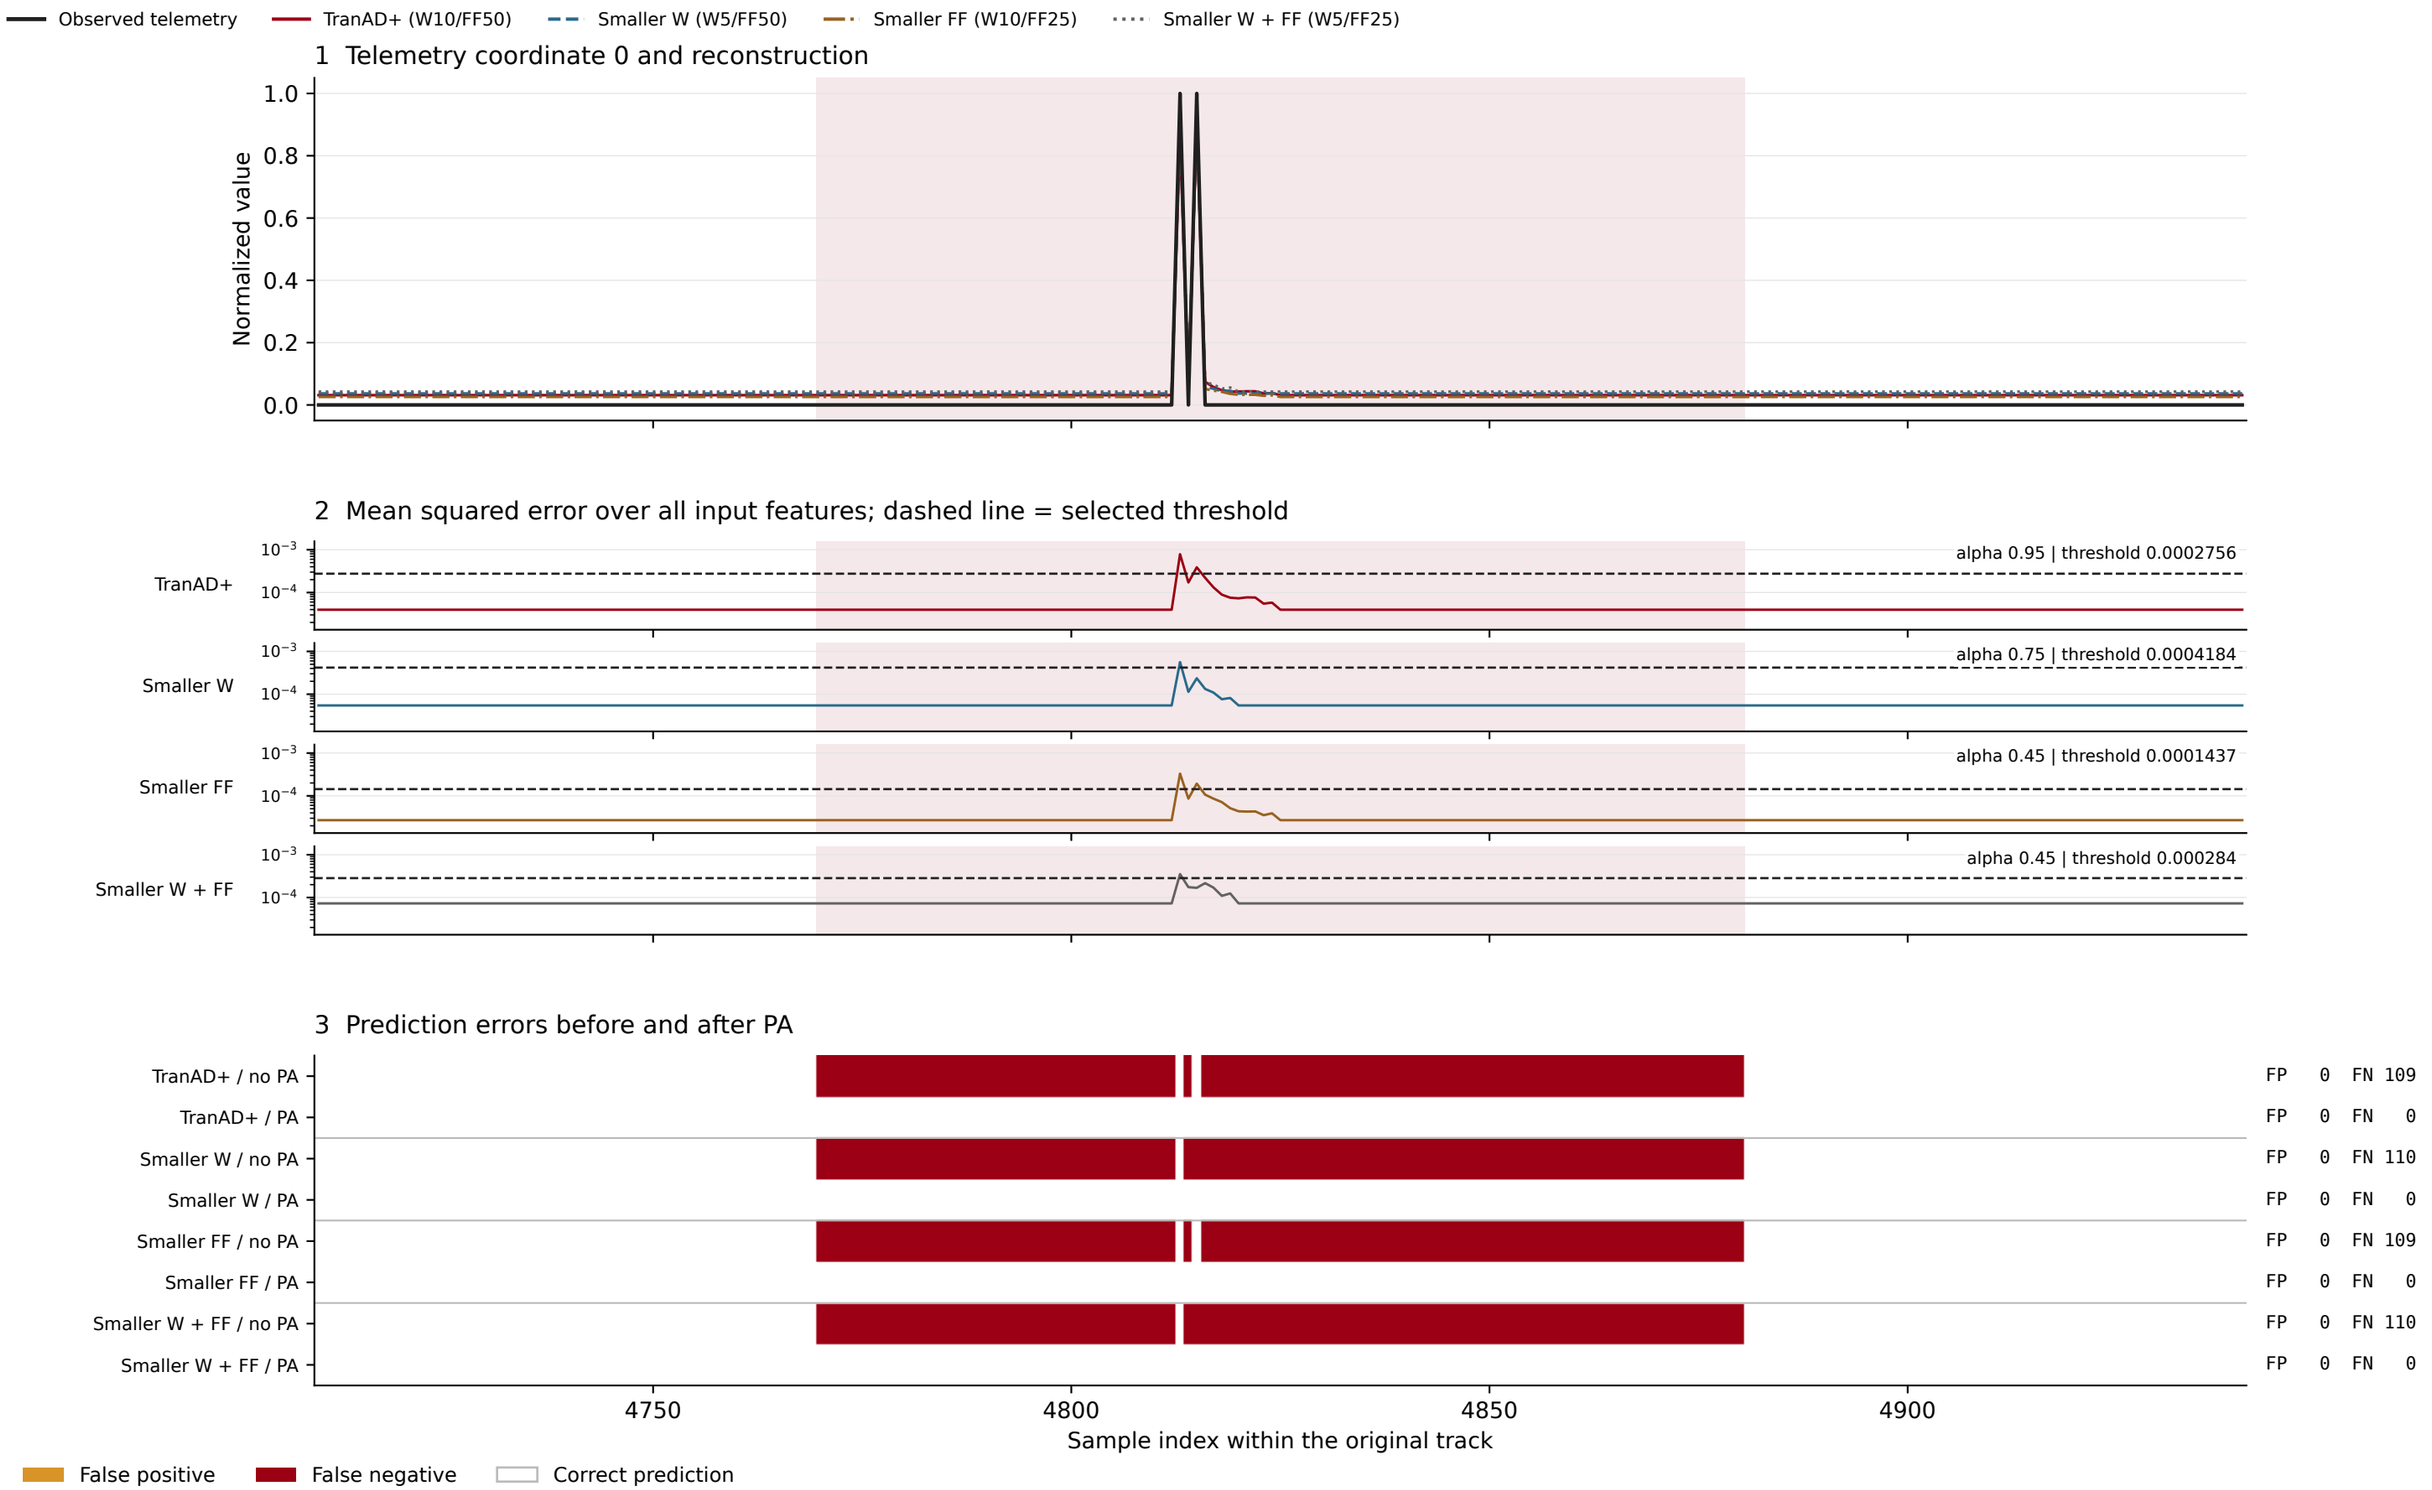
3. SMAP / P-4 / BF200

Anomalous interval: fewer direct hits can retain PA credit

Original saved alpha and threshold for each model | seed2026 | selection category agrees in 2/3 seeds (BF)



Pale shading: supplied positive labels. PA is applied on the full original stream before cropping; false positives remain unchanged.

Top shows one telemetry coordinate; score uses all inputs. Coordinate-0 share of displayed MSE: 99.3%, 99.5%, 98.9%, 99.6%.

Illustrative, outcome-selected examples; candidate lists and selection rules are saved. Anonymous channel IDs do not establish a physical fault cause.
